Introduction

This document outlines how the Apple Sports API will provide the SCTE 224 payload for live sporting events.

Expected Interaction Flow

The Apple Sports API will provide two endpoints, a Schedules endpoint that will provide the ability to search events and another to retrieve the SCTE 224 of the specific event.

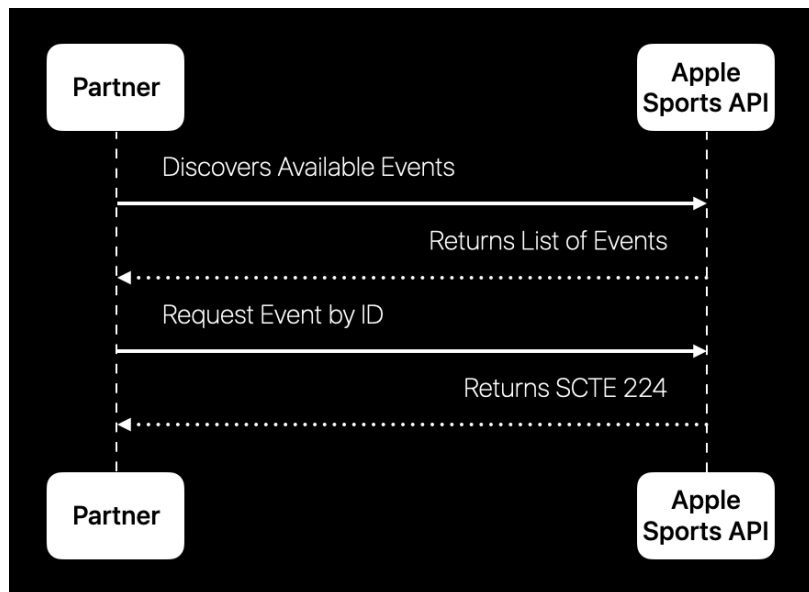

Figure 1: Expected sequence of interactions with partner and Apple Sports API.

Authentication Instructions

To integrate with the endpoints, you will need to create a mTLS certificate, which is used for authentication and authorization. Below are the instructions for setting up your certificates (run once for prod, once for non prod)

Apple Sports API mTLS certificate request instructions:

1) Run the following command. Be sure to replace `<PRIVATE KEY PATH>` (example: `/Users/myService/certs`) with a path to a secure location that can store your certificate's private key.

```
openssl req -new \  
-newkey rsa:2048 \  
-sha256 \  
-keyout <PRIVATE KEY PATH>/<IDENTITY GROUP>.key.pem \  
-subj "/O=ASE/CN=<IDENTITY GROUP>"
```

2) When prompted enter a PEM pass phrase. This will be needed to use your private key in the future and should not be shared with Apple.

3) Copy and paste the certificate request (including the lines with `BEGIN CERTIFICATE REQUEST` and `END CERTIFICATE REQUEST`) into a reply to this email.

4) Within this email, also please provide the public IPs of the servers where this mTLS cert will be used. They can be individual IPs or subnets. We will allow list these IPs in our environments. Both a valid mTLS cert and an allow listed IP are required to access Apple API endpoints.

5) Wait for a reply with your mTLS client certificate.

From the command above:

Note that the `IDENTITY GROUP` will be provided by Apple Sports API.

Be sure to replace `PRIVATE_KEY_PATH` to where you want your private key to be generated.

When prompted enter a PEM pass phrase. This will be needed to use your private key in the future and should not be shared with us.

Copy and paste the certificate request (including the lines with `BEGIN CERTIFICATE REQUEST` and `END CERTIFICATE REQUEST`) and send it to us.

We will add it to apple certificate manager and send you back your mTLS client certificate file.

Schedules Endpoint

Production: [https://api-escher-amp.apple.com/distribution/live-events-feed/v1/\[partner\]/live-events](https://api-escher-amp.apple.com/distribution/live-events-feed/v1/[partner]/live-events)

Staging: [https://api-escher-stage-amp.apple.com/distribution/live-events-feed/v1/\[partner\]/live-events](https://api-escher-stage-amp.apple.com/distribution/live-events-feed/v1/[partner]/live-events)

Schedules endpoints will return a list of available live events. The event schedule is subject to change and should be regularly polled to maintain an up to date schedule by the partner.

```
{
  "totalItems": "20",
  "nextPageOffset": "10",
  "events": [
    {
      "eventId": "mls.MLS-MAT-00099K_SP.primary",
      "description": "Watch the Whitecaps host LAFC",
      "type": "MLS",
      "lastUpdated": "2025-11-10T00:00:00.00Z",
      "startDateTime": "2025-11-22T02:30:00.000Z"
    }
  ],
  ...
}
```

Query Parameters

Parameter	Type	Required	Description	Example	Default	All Value Options
startDateTime	String	Optional	Events with start times that are greater than or equal to this parameter will be returned. Must be in ISO 8601 format.	2025-10-20T00:00:00.00Z	Current DateTime	[datetime in ISO 8601 format]
endDateTime	String	Optional	Events with start times that are less than or equal to this parameter will be returned. Must be in ISO 8601 format.	2025-10-30T00:00:00.00Z	null	[datetime in ISO 8601 format]
type	String	Optional	Filters events to a specific league or event type (e.g., MLS, MLB).	MLS	null	See Table Appendix: Types
limit	Integer	Optional	The maximum number of events to return in the response.	10	1000	[free form text]
nextPageOffset	Integer	Optional	The number of events to skip from the beginning of the result set. Used for pagination.	20	null	[free form text]

Event Endpoint

Each event in the schedules, can be retrieved by the below endpoint. The event IDs will not change and updates to the given event SCTE 224 will be made on an as needed basis. Polling is expected to ensure the most update to date information.

Production: [https://api-escher-amp.apple.com/distribution/live-events-feed/v1/\[partner\]/live-events/{event-id}](https://api-escher-amp.apple.com/distribution/live-events-feed/v1/[partner]/live-events/{event-id})

Staging: [https://api-escher-stage-amp.apple.com/distribution/live-events-feed/v1/\[partner\]/live-events/{event-id}](https://api-escher-stage-amp.apple.com/distribution/live-events-feed/v1/[partner]/live-events/{event-id})

Event Cancellation, Postponement & Rescheduling

An event status will be marked as `cancelled` if the broadcast is cancelled or will be rescheduled. The SCTE 224 package information should NOT be used by the partner for any purpose while it is marked as `cancelled`. If the event is rescheduled, then the event status will be updated to `active`, and the SCTE 224 will reflect the new date and time.

Media Payload

Media

Top level container for SCTE 224.

Attribute Name	Type	Definition	Example
id	String	The ID that unique identifies the event	mls.2261225.primary
lastUpdated	ISO Date String	Date the payload was last updated	2025-09-23T00:00:00Z
description	String	Description of event	10.03.2025 - Columbus Crew vs. Philadelphia Union

Alt ID

List of Alternate IDs for this Event.

Attribute Name	Type	Definition	Example	All Value Options
type	String	Type of Alt ID	trb	See Description Types
description	String	Optional description field	en-US	[free form text]

Description Types

label	Definition
private:trb	Tribune Media ID
private:league	League ID (if available)

Metadata

Container that will hold `ale` name-spaced metadata for the live event.

All Countries will be in ISO 3166-1 format and all language codes will be in BCP 47 format, * will indicate the data can be used globally, unless a field is already specified for that language/country.

Apple Live Events Specification

Property Name	Attribute Name	Type	Definition	Example	All Value Options
ale:event	-	-	Namespaced event container	-	-
ale:status (see docs)	-	String	Status of the event	cancelled	cancelled, active
ale:titles	-	-	Title of the live event	Vancouver Whitecaps FC vs. Los Angeles Football Club	[free form text]
	language	String	Language code in BCP 47 format	en-US	[language code in BCP 47 format]
ale:descriptions	-	-	Description of the live event	Watch the Whitecaps host LAFC	[free form text]
	language	String	Language code in BCP 47 format	en-US	[language code in BCP 47 format]
ale:shortNames	-	-	Shortname of the live event	Vancouver vs. LAFC	[free form text]
	language	String	Language code in BCP 47 format	en-US	[language code in BCP 47 format]
ale:leagueAbbreviation	-	String	League abbreviation	mls	[free form text]
ale:leagueNames	-	-	League name	MLS	[free form text]
	language	String	Language code in BCP 47 format	en-US	[language code in BCP 47 format]
ale:competitors	-	-	List of Competitors	-	See Competitors Section
ale:venueNames	-	-	Venue name	BC Place	[free form text]
	language	String	Language code in BCP 47 format	en-US	[language code in BCP 47 format]
ale:venueAddress	-	-	Venue address	Vancouver, British Columbia, Canada	[free form text]
	language	String	Language code in BCP 47 format	en-US	[language code in BCP 47 format]
ale:artworks	-	-	-	-	-
	url	String	Url address of image asset	https://someurl.com	[free form text]
	height	String	Image height in px	2160	[free form text]
	width	String	Image width in px	3840	[free form text]
	type	String	Usage type	cover_artwork_horizontal	See: Artwork Types
	languageCountryList	String	Comma separated language code in BCP 47 format	*	[language code in BCP 47 format]

Property Name	Attribute Name	Type	Definition	Example	All Value Options
	country	String	Country code this Viewing Policy applies to two character country in ISO 3166-1, or * for all countries	*	[country code in ISO 3166 format] or *
	language	String	Language code in BCP 47 format, or * for all languages	*	[language code in BCP 47 format or *]
ale:startDateTime	-	String	Start time of event in ISO 8601	2025-10-02T11:30:00.000Z	[datetime in ISO 8601 format]
ale:endDateTime	-	String	End time of event in ISO 8601	2025-10-02T15:30:00.000Z	[datetime in ISO 8601 format]

Artwork Types

Artwork Type	Height	Width
cover_artwork_horizontal	2160	3840
cover_artwork_vertical_wide	4000	3000
cover_artwork_vertical	3000	2000
cover_artwork_square	3000	3000
centered_background	2160	3840
right_background	2160	3840
cover_artwork_horizontal_unattributed	2160	3840

Competitors

Competitors with characteristics of each competitor for the live event.

Property Name	Attribute Name	Type	Definition	Example	All Value Options
ale:competitorName	-	String	Name of competitor	Vancouver Whitecaps FC	[free form text]
	language	String	Language code in BCP 47 format	en-US	[language code in BCP 47 format]
ale:characteristic	-	String	Value of the characteristic, will be specific to the the type	TRUE	[free form text]
	type	String	Event specific characteristics of the competitor	isHome	isHome (F1 characteristics pending)

MediaPoint Payload

Each MediaPoint will contain information for each feed tied to this live event i.e. English Feed, Spanish Feed, Worldwide Feed. The MediaPoint will only consist of alternative feeds for this event and will never contain feeds for any other content.

MediaPoint

Attribute Name	Type	Definition	Example
id	String	The ID that unique identifies this specific MediaPoint, will be stable once created	mls.2261225.primary/1
lastUpdated	ISO Date String	Date the payload was last updated	2025-09-23T00:00:00.000Z
effective	ISO Date String	Avail start window	2025-10-02T01:30:00.000Z
expires	ISO Date String	Avail end window	2025-10-04T01:30:00.000Z

Alt ID

List of Alternate IDs for this MediaPoint.

Attribute Name	Type	Definition	Example	All Value Options
type	String	Type of Alt ID	external	See Description Types
description	String	Optional description field	en-US	[free form text]

Description Types

label	Definition
private:external	Id to reference back to Apple's Business Intelligence team

Metadata

Metadata for this specific feed.

Apple Live Events Specification

Property Name	Attribute Name	Type	Definition	Example	All Value Options
ale:broadcast	-	-	Broadcast container	-	-
ale:feeds	-	-	Path of feed	-	-
-	source	String	Description of feed url	primary	primary, backup
-	url	String	URL of feed	ABC_DE_EFG_000	[free form text]

Property Name	Attribute Name	Type	Definition	Example	All Value Options
ale:order	-	String	Display order of the MediaPoint Feeds	1	[free form text]
ale:primaryLocale	-	String	Primary locale of the given MediaPoint, two character language code ISO 639	en	[language code in ISO 639 format]
ale:audioTracks	-	String	Available AudioTracks	-	-
-	language	String	Two character language code ISO 639	en	[language code in ISO 639 format]
ale:notes	-	String	Notes	This is the US_NATIONAL_FEE D	[free form text]
ale:artworks	-	-	Optional artwork to be used for the specific feed	-	-
	url	String	Url address of image asset	https://someurl.com	[free form text]
	height	String	Image height in px	2160	[free form text]
	width	String	Image width in px	3840	[free form text]
	type	String	Usage type	cover_artwork_horizontal	See: Artwork Types
	languageCountryList	String	Comma separated language code in BCP 47 format	*	[language code in BCP 47 format]
	country	String	Country code this Viewing Policy applies to two character country in ISO 3166-1, or * for all countries	*	[country code in ISO 3166 format] or *
	language	String	Language code in BCP 47 format, or * for all languages	*	[language code in BCP 47 format or *]
ale:titles	-	-	Optional title to be used for this specific feed	Vancouver Whitecaps FC vs. Los Angeles Football Club	[free form text]
	language	String	Language code in BCP 47 format	en-US	[language code in BCP 47 format]

Apply

The apply block will define the viewing policies of a given feed and will always contain two Viewing Policy blocks, one for `distribute` and one for `entitlement` representing allowed countries to broadcast and required entitlement to view. The `vodVariation` will be present if a given feed is allowed to be used as a VOD replay version of the given feed.

Property Name	Type	Definition	Example	All Value Options
aleaction:action	String	Type of action for this Viewing Policy	distribute	See: Action Types
aleaudience:country	String	Country code this Viewing Policy applies to two character country in ISO 3166-1	US	[language code in ISO 3166 format]
aleaudience:subscription	String	Type of entitlement required to view this feed	tv	tv, free

Action Types

Type	Definition
distribute	Indicates this ViewingPolicy determines which countries this Media Point is allowed in
vodVariation	Indicates this ViewingPolicy determines which countries this Media Point is allowed to be used as VOD replay after event has aired
entitlement	Indicates this ViewingPolicy determines what subscription is necessary for to view this Media Point
